## ABOUT

Software Engineer with experience in Ruby and JavaScript frameworks. With a background in film production, I have transitioned from telling cinematic stories to building technological narratives.

## TECHNICAL SKILLS

Ruby, Rails, SQL, JavaScript, React, Redux

## TECHNICAL PROJECTS

**Starfinder Companion** - [AndyAtari/Starfinder Companion App \(github.com\)](#) | [Starfinder Companion - YouTube](#)

A free and open-source character builder for the science fiction/science fantasy role-playing game, [Starfinder](#).

- Used MVC with Ruby on Rails conventions for efficient, scalable, and easy-to-read code
- Employed validations and user authentication, including Omniauth, for secure and convenient login
- Initiated ActiveRecord for fast data management and unique database associations

**Reel Vault** - [AndyAtari/reel-vault \(github.com\)](#) | [Reel Vault Sinatra Project - YouTube](#)

A film print management app that allows users to keep track of their film collection and view other registered film prints.

- Built with Ruby Sinatra as an MVC application that supports fast development and easy code collaboration
- Styled completely with CSS and JavaScript while accounting for cross-browser compatibility
- Enabled search features to expedite finding film prints and to create a user-friendly experience

**An Animator's Dozen** - [AndyAtari/Short\\_FilmFestival\\_App \(github.com\)](#) | [An Animator's Dozen - YouTube](#)

A virtual animated short film festival.

- Frontend SPA built with React and object-oriented JavaScript while using proper Restful routing
- Polished interactive web design and smooth rendering on the client side through proper state management
- Displayed and persisted data from backend API and created components for a Content Management System
